

Sustainability at the WKK Group - 2026

We believe growth and responsibility go hand in hand. Together with our partners and customers, we build a business that creates impact—today and in the future.

Building a more sustainable assortment

We offer more environmentally friendly options within our assortment, such as reusable cable ties. In 2026, we introduced Fibre Strap cable ties — a kraft paper-based sustainable alternative produced in Europe and available from only a limited number of suppliers.

Local & Global charities

Together with our local offices, we select 4 charities each year. 50% of the annual WKK Cares budget goes to a major project or local initiative and 50% is reserved for acute cases.

Circular office

Our offices and warehouses are designed to meet modern sustainability standards. In Nettetal, we use circular energy to reduce waste, and in the Netherlands we operate on 100% certified green electricity.

WKK Recycle Program

To make a contribution in the battle against environmental pollution and the shortage of plastics, we have introduced a recycle program at WKK. WKK collects used cable ties and sends them to a partner for recycling. This way, both supplier and user make an effort to reduce our impact on the environment.

Greener Together

Through our Greener Together campaign, we donated over 2,700 trees in partnership with Trees for All—on behalf of our customers. Half were planted in the Netherlands, where colleagues actively contributed.

Together, we help capture CO₂ and build a greener future.

Family business values

As a family business, our values shape the way we work every day.
